Introducción

El control de versiones es una práctica fundamental en el desarrollo de software, ya que permite gestionar, registrar y supervisar los cambios realizados en el código fuente de un proyecto. En este sentido, Git se ha consolidado como una de las herramientas más utilizadas a nivel mundial para el versionamiento, facilitando el trabajo colaborativo y el seguimiento histórico de modificaciones.

La presente evidencia tiene como objetivo demostrar la instalación, configuración y uso básico de la herramienta Git, aplicando comandos fundamentales tanto en entorno local como remoto. A través del desarrollo de un repositorio práctico, se evidencia la creación de un proyecto, el registro de cambios mediante commits y la sincronización con la plataforma GitHub como repositorio remoto.

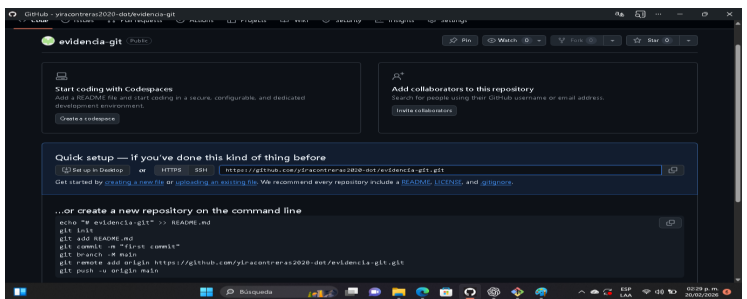

Mediante las capturas de pantalla presentadas, se documenta paso a paso el proceso realizado, evidenciando el cumplimiento de los criterios establecidos para la actividad de aprendizaje relacionada con la configuración de herramientas de versionamiento para el control de código.
